

Copyright and Author Rights and Responsibilities

What rights do authors retain?

There is often confusion about what rights authors retain after assigning copyright to us. When copyright is assigned to Inderscience, you can continue to enjoy the following rights:

- Patent and trademark rights.
- The right to be identified as the author (i.e. you assert your moral rights under copyright law).

Copyright guidelines for Open Access (OA) articles

- Copyright assignment does not apply to articles designated by authors as Open Access. Authors of Open Access articles are not required to sign the Author Copyright Agreement.
- All of our journals allow the author of an Open Access (OA) article to retain copyright of their article. Authors of OA articles retain copyright and grant the journal right of first publication with the article simultaneously made available in repositories under a Creative Commons license to allow others to freely access and use the OA article without any period of embargo. [Information on our OA policies is available here.](#)
- We comply fully with the Open Access requirements of UKRI, Wellcome and NIHR, which state that articles funded by any of these bodies must be published as Open Access. Where required by their funder, authors of OA articles retain the right to distribute their accepted manuscript via institutional and/or subject repositories (e.g. Europe PMC), under a Creative Commons Attribution 4.0 International (CC BY 4.0) licence for release no later than the date of first online publication.

Copyright guidelines for non-Open Access (OA) articles

- *If/when a non-OA article is accepted for publication, Author Copyright Agreements should be submitted via the online submissions system, along with the final accepted version of the article. Each author must sign a copyright agreement ([Author Copyright Agreement](#)) form. Signatures of all authors may appear on one form or be sent on individual forms. Each form must list the names of all authors of the article under the title of the article at the top of the form, and must reflect the order given in the article. We would expect a "Corresponding Author" to be responsible for the collection and provision of the copyright assignment from each author.*
- Inderscience is wholly committed to the highest standards of publishing, founded on rigorous double-blind peer review. In all that we do, we work to ensure the widest possible access to the articles that we publish, to enhance the reputation of the author, the journal, its Editor and Editorial Board, and the value that we add as publisher in both printed and online forms.

- In order to allow us to do this properly and professionally, we ask authors of non-OA articles accepted for publication to sign our [Author Copyright Agreement](#) assigning copyright to Inderscience.
- The assignment of copyright to the publisher is standard practice in journal publishing. This enables us, as the publisher, to negotiate subsidiary licences to database aggregators and document supply companies, and allows permissions to reproduce articles in books, course packs, electronic reserve or for library loan to be handled efficiently and with sensitivity to changing library and reader needs.
- This relieves authors of a time-consuming and costly administrative burden. It also enables us to defend and enforce authors' rights against plagiarism, copyright infringement, unauthorised use and, most important for authors' professional reputation, breach of authors' moral rights.

For non-OA articles, you must obtain written permission beforehand from Inderscience for the following:

1. Copies of your article in a course pack for onward commercial sale by a third party.
2. Except as specifically provided above, distribution in print or electronic form by any third party such as the convenor of a conference, database aggregator, website, blog or listserv.
3. Any other commercial use.

What happens when the author does not own copyright in the article?

If you have written the article in the course of your employment, your employer may consider that it owns the copyright and is considered the legal author. This is often referred to as 'Work for Hire'. In such cases, your employer should sign the Author Copyright Agreement. This does NOT apply to faculty and researchers working in a university and submitting the article as a normal part of research activity.

If you are a government employee, the following applies:

1. *If you are a UK, Canadian or Australian Government employee*

Crown Copyright applies to your article, and it should be cleared for publication by your Head of Department. This applies in the UK, Australia, Canada, New Zealand and eleven other Commonwealth countries.

2. *If you are an officer or employee of the US Government*

An article prepared by an officer or employee of the US Federal Government does not enjoy copyright protection under US law; it is 'non-copyright', so there is no copyright to assign. It is your responsibility to make the necessary enquiries and provide Inderscience with any form of words that is required for publication. Please note that this applies only to Federal, and not to state or local government employees.

If your research has been funded by a grant from a research funding agency, the funding grant may have had conditions attached to it that affect the assignment of copyright to Inderscience, or require you to post your article to a repository. It is your responsibility to advise Inderscience of any such conditions and provide any documentation that may be required before publication.

What are the author's responsibilities?

You are making legal undertakings about your article. It is the author's responsibility to ensure and

warrant that:

1. The article that you submit must be original work and must not have been published before or submitted elsewhere for publication.
2. It must not contain any material that is obscene, libelous, in breach of any person's copyright or other rights, in breach of any right of privacy, or in any other way unlawful.
3. Written permission must have been obtained in advance from any copyright owner for the use in print and electronic form of any material (e.g. text, figures, tables, illustrations or graphics) that does not belong to the author.

What happens if there is more than one author?

All authors should sign the Author Copyright Agreement, either on the same Author Copyright Agreement form, or on separate forms if necessary. However, if it is not possible to obtain a physical signature from each and every author, the author submitting the article (usually the "Corresponding Author") must have the other authors' written agreement to enable him/her to enter into the Author Copyright Agreement on their behalf.
